Supply Lags

Community pushback

Protests over power,
water and local impact

(Fossil Fuel Alternatives: Geothermal Fusion Hydro Nuclear Solar Wind)

Where Is The Alternative Fossil Fuel Play?

**We Believe Within The:
Nuclear Power Ecosystem**

From mine to grid: where each company sits

Long and Short sit at the mine end; the Alternative covers the scarcer links

Scarcest links: enrichment and grid-connected power.

Is the Play Short, Long or Alternative?

Answer: None of the Above.

Mandate	Call	What would change it	Signed off
Short	Watchlist: short UUUU	VAC terms confirmed Exit above \$16.12	Jared Mount Sep 26
Long	Watchlist: Paladin	Price $\leq$ A\$8.59 Or 20% upside on re-test	Xiaowen Chen Sep 27
Alternative	Watchlist: BWXT	Price near \$133 Or a higher target	Shawyan Tabari Sep 28

**No link in the chain clears our bar yet:
mining, fuel and reactors all rank Watchlist.**

DNN	Construction-stage	2	2	5	3	4	3.10	No short: resolved

Energy Fuels (UUUU): the VAC dilution mechanism

The deal

- VAC priced at \$16.12/share (Jun 22)
- \$718M cash + 65.9M new shares (~26% dilution)
- Below \$20.93, Ara gets up to \$135M more preferred
- Close expected early 2027

What's not priced in

Consensus: Strong Buy, \$24.15 avg target

Loan: \$725M gov't loan funds the mill, not VAC

Funding: \$250M Goldman loan + cash, not equity

Sizing: \$135M cap $\approx$ 4.7% of market cap

Bottom line: a specific, dated mechanism. Is it priced in?

Where the price sits and our view

Our view: the stock sits closer to our downside target than to the deal price it needs to reclaim to kill the thesis — but it also sits well below the \$24.15 Street consensus, which is the strongest open question.

Energy Fuels (UUUU): Watchlist, not a clean Short

Factor 6: must pass

- Borrow: 0.57%, 850K shares: pass
- Short interest: 22.3% of float, elevated
- Days to cover: 8.91 and rising
- Squeeze Score 73/100: keeps it Watchlist

Execution plan

Entry: only after VAC terms are confirmed

Target (3–6 mo): \$9.00–\$9.65

Cover: clean close, better terms, or no deal

Size: ~1% of NAV; squeeze risk caps it

Dissent (Street): \$24.15 avg target. Flip: days to cover < 6 twice; exit above \$16.12.

Council Review: pressure-testing the call

What the Council found

- Am I Deluded? Slightly one-sided toward dilution
- Attack the Deal: main risk is a rare-earth squeeze
- Stress Test: a squeeze could hit before dilution
- Read My Excuse: Watchlist is warranted

What changed as a result

Rationale: rare-earth counter-case added

Plan: flip and exit conditions added

Correction: “CEO purchase” was wrong: sales

Sign-off: Jared Mount, Sep 26

Recommendation: sourced, verifiable, sign-off ready.

Long Analysis

The ranking result for the long position

Company	Type	Val	Cash	Growth	Resil.	Mkt	Score	Verdict
PDN	ASX/TSX producer	3	4	4	4	5	3.90	Long A: Watchlist

Source: FUTU Securities, Code PDN, data fetched Sep 28, 2026

Long: what we buy

Ramp-up delivered: FY26 output of 4.82 Mlb landed at the top of guidance, and FY27 is guided up to 5.1–5.6 Mlb.

Price upside built in: Paladin sold at an average of US\$70/lb while the long-term contract price sits around US\$96.5/lb. Over 85% of LHM reserve.

Growth potential: Canada's PLS project: about 9 Mlb a year at a US\$15.20/lb all-in cost, with commissioning targeted for 2031.

and business stages

Source: <https://stockanalysis.com/stocks/ccj/statistics/>

Paladin: Investment plan

Execution plan

Entry: $\leq$ A\$8.59, or a target $\geq$ A\$11.46

Target: A\$10.31 (+8%); gate not met

Exit review: A\$8.12, or a guidance cut

Size: up to 1.60% of NAV

Our worries:

Langer Heinrich output ceiling:
Ord Minnett doesn't expect the mine to sustain its 6 Mlb nameplate for a full year and cut FY28–30 to 5.7 Mlb.

PLS funding:
A potential significant capital raise

Potential Long - Denison: construction-stage upside

Thesis

- 95% of Wheeler River; FID Feb 2026
- Study opex US\$6.28/lb (2023)
- Capex ~C\$600M; output mid-2028
- Value rises as risk falls

Execution plan

Entry: ≥30% upside

Funding test: costs covered + 20% cushion

Exit review: 6-month slip or +15% cost

Size: 0.80% of NAV, on milestones

Dissent: US\$6.28/lb is a study number; a 2-year delay cuts value ~17%.

Potential Long - Kazatomprom: low cost, if the cash gets out

Thesis

- Largest ISR producer
- H1 C1 cost US\$24.48/lb
- AISC US\$38.45 vs. realized US\$67.88
- FY AISC guide up: US\$39.00–40.50

Execution plan

Screen first: custody, dividends, sanctions

Entry: $\geq 30\%$ upside to cash-flow value

Exit review: route, tax or access change

Size: 0.60% of NAV; cash if a check fails

Dissent: jurisdiction risk and rising costs erode the low-cost edge.

Long position viewed by different Philosophies

Six different investment philosophies on one asset

Author	Book	Style
Peter Lynch	One Up on Wall Street	Growth at a reasonable price
Thornton L. O'glove	Quality of Earnings	Forensic accounting
Benjamin Graham	Security Analysis	Deep value, margin of safety
Nassim Taleb	The Black Swan	Tail risk, barbell
Morgan Housel	The Psychology of Money	Behavioral finance
Tim Koller	Valuation	Corporate valuation (DCF)

Six philosophies, three stocks

Lens	Paladin (A)	Denison (B)	Kazatomprom (C)
Lynch	Track the ramp; don't overpay	Own only on milestones	Hard to know from here
O'glove	Cost must show in cash flow	Inventory sales aren't mine cash	Dividends need cash cover
Graham	No margin of safety at 86x	Speculative until it produces	Cheap only if we get paid
Taleb	One mine: one point of failure	Small bet, big upside	Sanctions risk hard to size
Housel	Cash gives room; price doesn't	Much must go right: keep small	Size so being wrong is OK
Koller	Mine DCF + PLS option	DCF with delay cases	Country-risk scenarios

Agree: Paladin is best, but re-test the price; DNN and KAP stay small.

Differ: Taleb likes Denison's upside; Graham and O'glove want cash first.

Catalysts to watch and scenarios

Case	Spot / Term	Paladin (A)	Denison (B)	Kazatomprom (C)
Bear	\$60 / \$75	Margin squeezed	Funding pressure	Costs squeeze margin
Base	\$95 / \$100	Ramp lifts cash	Value builds	Solid if costs hold
Bull	\$120 / \$115	More cash, lagged	Most upside	More cash if paid out

Next 90 days: Paladin report (~Oct 21–22), AGM (Nov 17), sleeve review (Nov 9).

Through 2027: Phoenix build, PLS licensing, Kazatomprom costs.

2028: Russian-uranium waivers end; Phoenix first output.

Council Review: pressure-testing the Long call

What the Council found

- Am I Deluded? Not yet: 3 of 7 names ranked
- Attack the Deal: 20% gate had no valuation
- Stress Test: a 61x P/E can compress
- Read My Excuse: KAP delay real; CCJ's avoidable

What changed as a result

Ranking: all seven re-scored; Paladin leads

SPUT: moved to the Alternative

Re-test: Paladin +8%: Watchlist

Sign-off: Xiaowen Chen, Sep 27

Still open: Cameco valuation (Oct 30), KAP access, Denison funding.

Alternative Investment: Vertical Supply Chain

How the six qualified as Alternatives

Name	Segment	Nuclear share of revenue	Result
SPUT	Physical uranium	None: holds uranium (98%+ of assets)	Pass: uranium-fund rule
BWXT	Components & services	Gov. Ops segment 73% (FY2025 10-K)	Pass
CEG	Generation	~28–38% (est.); not disclosed	Ineligible (estimate)
LEU	Enrichment	~100% (est.)	Pass
SMR	Advanced reactors	100%, but \$10.7M revenue	Pass; no binding orders
OKLO	Advanced reactors	\$1.21M services; Meta prepayment	Not yet: prepayment ≠ contract

Listed and liquid: all six pass.

Nuclear revenue: majority (50%+) from nuclear power; uranium funds (90%+) qualify.

Beats our best calls? BWXT ~15% upside vs. Paladin ~8%; neither clears 20%.

Alternative: BWXT on the Watchlist

Company	Segment	Val	Cash	Growth	Resil.	Mkt	Score	Verdict
SPUT	Physical uranium	5	4	2	4	4	3.85	Runner-up
BWXT	Components	3	4	5	4	3	3.80	Watchlist (lead)
CEG	Generation	3	4	4	3	3	3.40	Ineligible
LEU	Enrichment	2	2	4	2	1	2.25	Not selected: 229x
SMR	Adv. reactors	2	1	2	2	1	1.65	Watchlist short
OKLO	Adv. reactors	1	1	2	2	1	1.40	Ineligible

Human chair: Shawyan Tabari. **Verdict:** Watchlist (BWXT lead).

Our read: We're confident BWXT is the right Alternative pick, even though SPUT scores slightly higher. Owning SPUT would concentrate the uranium bet we already make through the miners. BWXT is the only company building reactors for the Navy's submarines and carriers, so it gets paid whether uranium goes up or down. The only problem is price. Upside today is about 15% and our bar is 20%, so for now it **stays on the Watchlist**.

SPUT vs. BWXT: cheap uranium vs. a growing backlog

Factor	SPUT: Evidence	Score	BWXT: Evidence	Score
Valuation (25%)	Price US\$19.00 vs. NAV US\$21.52 11.7% discount	5	21.1x EV/EBITDA (2026 guide) FCF yield ~2.8%	3
Cash Economics (20%)	Spot US\$89.68, term US\$96.50/lb Fees 0.71% a year	4	Book-to-bill 1.7x Gov. Ops margin guide ~20.5%	4
Growth (20%)	Can't issue units below NAV	2	Backlog \$8.4B, up 40% Army Janus selection (Aug 26)	5
Resilience (20%)	98%+ of assets in uranium	4	Net debt \$1.41B (~2.3x EBITDA) Fitch BBB	4
Market Confirmation (15%)	12-month: -3% to -5% Cohort average: -40.5%	4	12-month: -20.9% Analysts cutting targets	3
Weighted Score		3.85		3.80
Eligibility	Pass: uranium-fund rule		Pass: 73% of revenue from Gov. Ops segment (FY2025 10-K)	

Our read: When you look at these two side by side, the difference is clear. SPUT is uranium at a discount, and it only pays off if uranium goes up. BWXT's order book grew 40% in one year. The scores are basically tied, so we'd rather own the company that can grow on its own.

CEG is ineligible; LEU is priced for growth

Factor	CEG: Evidence	Score	LEU: Evidence	Score
Valuation (25%)	14.8x EV/EBITDA (trailing) 21.3x forward P/E	3	229x EV/EBITDA (trailing) 60x forward P/E	2
Cash Economics (20%)	PJM capacity at the \$325 cap 2026 EPS guide \$11.50–12.50	4	Negative free cash flow	2
Growth (20%)	Calpine closed Jan 2026 Crane restart in 2027	4	Backlog \$4.5B \$900M DOE HALEU award	4
Resilience (20%)	Not documented (Council flag)	3	Relies on Russian supply to 2027 ~\$500M share raise	2
Market Confirmation (15%)	12-month: -22.4%	3	12-month: -46.7%	1
Weighted Score		3.40		2.25
Eligibility	Ineligible (28–38%, est.)		Pass (~100%, est.)	

SMR and OKLO: cash to spend, no orders to show

Factor	SMR: Evidence	Score	OKLO: Evidence	Score
Valuation (25%)	EV ~\$1.73B, cash-adjusted No binding orders	2	EV ~\$4.07B, pre-revenue	1
Cash Economics (20%)	Trailing revenue \$10.7M	1	Q2 revenue \$1.21M (services)	1
Growth (20%)	NRC approval, 77 MWe (2025) TVA 6 GW deal non-binding	2	Reactor criticality ~Aug 6 Aurora plant target 2028	2
Resilience (20%)	\$1.9B liquidity, no debt \$750M share-sale program	2	\$3.0B liquidity New \$1B share-sale program	2
Market Confirmation (15%)	12-month: -78.8% UBS Sell, \$6 target	1	12-month: -68% to -71%	1
Weighted Score		1.65		1.40
Short Feasibility	Fail: no dated catalyst		Fail: no catalyst; crowded	

BWXT: business up, price not yet at the gate

Thesis

- Backlog \$8.4B, up ~40%
- Book-to-bill 1.7x
- Guidance raised twice in 2026
- Shares ~43% below 52-week high

Execution plan

Entry: $\leq$ ~\$133, or a higher target

Target: \$152–167 (12 months)

Stop: close below \$125

Size: one-third starter

Strongest dissent: The best argument against BWXT is that the whole nuclear sector is trading on sentiment right now. BWXT raised guidance in Q2 and the stock still went down. We agree the price could keep falling, but the business isn't what's falling. That's a significant argument in favor of waiting for a better price.

What would change our mind: If Investor Day on September 29 gives us a reason to raise our target to around \$166, that clears our 20% bar and we'd buy.

If book-to-bill drops below 1.0, they're shipping more than they're winning new orders, thus leading us to drop it

BWXT: good business, price not yet at the gate

Target midpoint \$159.50 vs. \$138.47 today = +15%.

Our read: Buy at \$138 today and we're risking about 10% to make about 15%, roughly 1.6 : 1.

Wait for \$133 and we're risking 6% to make 20%, better than 3 : 1. It's the same stock, same business, but with twice the payoff just for being patient. That's why BWXT gets the same 20% bar as Paladin.

We're confident \$133 is the right entry because of this.

BWXT: catalysts and what the multiple implies

Case	EV / 2026 EBITDA	Implied price	What it takes
Bear	18x	~\$116	Sector keeps de-rating (Council stress test)
Today	21.1x	\$138.47	Sep 25 close
Base	23–25x	\$152–167	Guidance delivered; multiple recovers
Street	~31.5x	~\$214	Street average target (MarketBeat)
Imagination	~40x (assumed)	~\$276	Imagine: The Army's microreactor program takes off, data centers start ordering small reactors, and investors start valuing BWXT like a growth company instead of a Navy contractor.

Next: Investor Day (Sep 29); Q3 results (early Nov).

By early 2027: medical sale closes; 2027 guidance (~Feb).

Risk: 68% of BWXT's revenue comes from one customer, the U.S. government. These are long Navy programs though, so budget fights usually delay contracts instead of canceling them.

Council Review: pressure-testing the Alternative

What the Council found

- Am I Deluded? Partly: SPUT passed over by judgment
- Attack the Deal: ~15% upside, below the gate
- Stress Test: de-rating to 18x (~\$116)
- Read My Excuse: waiting for Sep 29 is fair

What changed as a result

Verdict: stage entry → Watchlist

Corrections: book-to-bill; Crane date

Flagged: CEG resilience; SPUT, CEG eligibility

Sign-off: Michael Kiernan, Sep 27

Recommendation: Watchlist BWXT. A self-review by Claude.

Outside red team: GPT Sol 6.0 on the Alternative

What GPT Sol 6.0 found

- Critical: Meta deal called unconfirmed
- High: eligibility overstated
- Medium: BWXT lead is a judgment
- Held: scores and valuation math

What we fixed

Oklo: Meta deal cited

Eligibility: SPUT rule written; CEG ineligible

Labels: BWXT lead = portfolio judgment

Verdict: unchanged: Watchlist

Council Findings

What the Council changed

The Council's decisive challenge for each call

Mandate	Persona	Challenge	Effect on the call
Short	Stress Test	Rare-earth squeeze risk	Kept Watchlist
Long	Attack the Deal	20% gate had no valuation	Re-scored; Watchlist
Alternative	Attack the Deal	~15% upside < 20% gate	Watchlist at ~\$133

Alternative also red-teamed by GPT Sol 6.0: labels fixed, verdict unchanged.

Imaginative Thoughts

What if AI gets far more efficient?

Imagination 1 of 4 · Bear

What we know

- Light replaces copper: optical switches use up to 5x less power
- Better GPUs: the IEA's efficient case is only 20% lower (2035)
- GPU heat warms homes, but makes little electricity

So what for us

Demand still grows, but fear hits first.

After DeepSeek (Jan 27, 2025), CEG, Oklo and NuScale fell 20%+ in a day.

Signal to watch: The next efficiency scare

What if fusion delivers power by 2030?

Imagination 2 of 4 · Wild card

What we know

- Microsoft: 50 MW from Helion, target 2028
- Google: 200 MW from Commonwealth Fusion, early 2030s
- OpenAI: in talks with Helion for up to 5 GW by 2030 (reported)

So what for us

About 250 MW is signed: roughly 1% of US data-center power. It hurts the 2030s reactor story (SMR, OKLO), not fuel.

Signal to watch: CFS SPARC test (2027); Helion's first power

What if state carbon laws are abolished?

Imagination 3 of 4 · Policy

What we know

- The Justice Department sued four states over climate laws May 2025
- A federal court blocked New York's \$75B climate law
- New York's credits support CEG's upstate reactors

So what for us

Nuclear loses its "clean" edge and gas gains.

Nuclear's case becomes firm, 24/7 power.

Hurts CEG, SMR and OKLO.

Signal to watch: Court rulings on state climate laws

What if time-to-power stays the bottleneck?

Imagination 4 of 4 · Bull

What we know

- PJM Interconnection's capacity price hit its \$325/MW-day cap
- Data centers: 4.4% of US power in 2023, up to 12% by 2028
- Microsoft's 20-year deal restarts Crane (2027)

So what for us

Existing reactors and the fuel chain win:

CEG and BWXT.

Our UUUU short gets harder.

Signal to watch: PJM auctions; hyperscaler power deals

Imagination: what each future does to our names

Effect on the share price: ▲ up ▼ down – little change

Future	UUUU (Short)	PDN (Long)	BWXT (Alt.)	CEG	SMR · OKLO
Bear: AI far more efficient	▼	▼	▼	▼	▼▼
Wild card: fusion by 2030	–	–	–	–	▼
Policy: carbon laws abolished	▼	–	–	▼	▼
Bull: time-to-power	▲	▲	▲	▲▲	▲

Our calls today: Watchlist on UUUU (short), PDN, BWXT

A falling price helps our short and brings our entries closer.
No future breaks our calls.

Conclusion

Conclusion Summary: Watchlist across the board — PDN and UUUU closest to clearing

LONG WAITING TIGGER

PDN

3.90 / 5

Leads the uranium cohort

Operating delivery and
uranium-price exposure.

**Entry $\leq$ A\$8.59, or
 $\geq 20\%$ revised upside.**

Cap 1.60% NAV | 24–36 mo.

CONDITIONAL SHORT

UUUU

2.50 / 5

Event-driven candidate

VAC funding and deal risk;
not a bearish uranium
view.

**Prove mispricing; pass
borrow / squeeze gates.**

Cap $\sim 1.00\%$ NAV | 3–6 mo.

ALL OTHER NAMES

WATCHLIST

**BWXT leads alternatives
DNN · KAP · CCJ · others**

Revisit valuation, funding,
timing and eligibility.

**No additional funded
positions at this stage.**

Watchlist $\neq$ investment approval

Select the exposures now. Release capital only when the gates clear.

PDN: own the ramp-up—at the right price

The long thesis is operating delivery; the margin of safety comes from the entry price.

LHM PRODUCTION • 100% MINE BASIS

4.82 → 5.1–5.6 Mlb

FY2026 actual → FY2027 guidance

Require cash conversion. PLS remains longer-dated optionality, not near-term earnings.

12-MONTH CHECKPOINT	Reference	Entry trigger
Price	A\$9.55	A\$8.59
Team target	A\$10.31	A\$10.31
Upside to target	+8.0%	+20.0%
Loss to A\$8.12 review	−15.0%	−5.5%
Reward / review loss	0.5×	3.7×

DISCIPLINED EXECUTION

≤ A\$8.59

Or support a target ≥ A\$11.46 at A\$9.55 with new evidence.

Do not raise a target to pass a gate.

Maximum proposed weight: 1.60% NAV

Reassess at A\$8.12 or a guidance cut; a cheaper price is not a reason to average down.

UUUU: prove mispricing—not just dilution

Retain the event-driven short thesis, but do not initiate on the current payoff alone.

loss to review level

THREE CONDITIONS BEFORE ENTRY

- 1** Pro-forma value loss after acquired cash flows and transaction funding.
- 2** Fresh borrow; squeeze review; <6 days to cover on two readings.
- 3** Rebuilt target and risk plan—a low factor score is insufficient.

Dissent: acquired cash flow and rare-earth upside can offset issuance and hurt the short.

The watchlist must earn its next allocation

Keep every other name unfunded until its specific promotion condition is met.

NAME	WHY RETAIN IT	WHAT EARNS A FRESH DECISION
BWXT	First alternative to revisit	≈US\$133 entry, or revised value with ≥20% upside; validate backlog conversion and the risk plan.
DNN	Construction de-risking	≥30% upside; project funding covers budget plus the deck's 20% cushion.
KAP	Operating case, access risk	≥30% cash-flow-value upside; verify custody, settlement and the ability to receive cash.
CCJ	Established benchmark	Reconciled sum-of-the-parts valuation shows ≥20% upside at the decision price.
NXE	Longer-dated development	Revisit timing and funding against the mandate; do not force a position to fill the sleeve.
SPUT	Direct uranium alternative	Establish a need for physical exposure and assess the NAV discount; avoid unintended overlap.

UEC / LEU / SMR: lower-priority monitoring. CEG / OKLO: research-only until the source mandate's eligibility tests are evidenced. No automatic substitute trades.

Long-Short, if the gates clear: PDN and UUUU

Release capital when new evidence changes the economics—not merely the narrative.

LONG PDN | ENTRY NOT YET MET

SHORT UUUU | VERIFY VALUE LOSS

CALL	EVIDENCE REQUIRED	ACTION IF PASSED	WHAT STOPS IT
PDN	Output / cash hold; ≤A\$8.59 entry or ≥20% revised upside.	Stage within the 1.60% NAV cap; 12-month checkpoint.	Guidance cut, weaker cash conversion or worse funding needs.
UUUU	Pro-forma downside; new terms / funding; borrow and squeeze pass.	Tactical short within ~1.00% NAV ceiling; reprice the risk plan.	Accretion, better terms, borrow failure or unacceptable squeeze risk.
OTHERS	BWXT valuation refresh; DNN / KAP milestones; all remaining gates.	Re-rank, then obtain separate approval. No forced substitutes.	Failed valuation, funding, access or eligibility tests.

Events to watch

Date	Event	What it could change
Sep 29	BWXT Investor Day	BWXT target; entry ~\$133
Oct 6–7	Kazatomprom mine tour	Access checks
~Oct 21–22	Paladin quarter report	Output; price vs. A\$8.59
Oct 30	Cameco Q3 results	Cameco vs. the 20% gate
Early 2027	Energy Fuels VAC close	Dilution; short trigger

Our long view on Paladin and short view on Energy Fuels are all situational which means any new information may change our current view

Who did what

Who	Role	Sep 25–27	Sep 28
Ben Beauchamp	Criteria	Wrote the five weighted factors every mandate uses	Recorded his criteria presentation; nothing else needed
Xiaowen Chen	Long chair	Council outline; Long memo and slides; signed off Sep 27	Confirmed the scores and KAP price; rebuilt the Long slides; wrote the conclusion
Michael Kiernan	Team lead; Alt. chair to Sep 28	Set up Claude, Drive, rules and ledger; issued research matrices; reviewed the Short; built Long support; had Claude draft the Alternative and chaired its review	Ran the feedback plan: answer-first opening, one score per company, Imagination; eligibility rulings; merged the deck
Jared Mount	Short chair	Short matrix and Energy Fuels thesis; Short slides; signed off Sep 26	Aligned Short scores to one score each
Shawyan Tabari	Alt. chair from Sep 28	Built slides from Claude's draft; no analysis of his own	Rewrote five slides in his words; checked figures; signed off
David Vargas	Alt. support from Sep 28	No contribution recorded	Agreed a slide split; no edits yet

Source: team ledger entries, Sep 25–28. Claude drafted analysis and slides; GPT Sol 6.0 red-teamed the Alternative.
