What are the important capabilities in the AI era

Xiaowen Chen (Xavier)

Content

- **Part I: My first MV** – Imagination, Curiosity, Execution, Resilience

- **Part II: My first Quant project** – Imagination, Curiosity, Execution, Judgment, Resilience

- **Part III: Career Hunt** – Clarification, Curiosity, Execution, Customization, Resilience, Authenticity

- **Part IV: Conclusion** – What's more

As AI grows more capable, what makes us uniquely human—and how can we strengthen those qualities?

Lessons from my personal experiences and real-world projects.

My example 1 – My first MV

We all know the day will come, but market don't care

"The AI story is great, until you read the 10K,…, 70% Nvidia's accounts receivable came from 5 customers"

-- Steve Eisman

"The AI boom is running on one giant loop, and time is running out"

-- Michael Burry

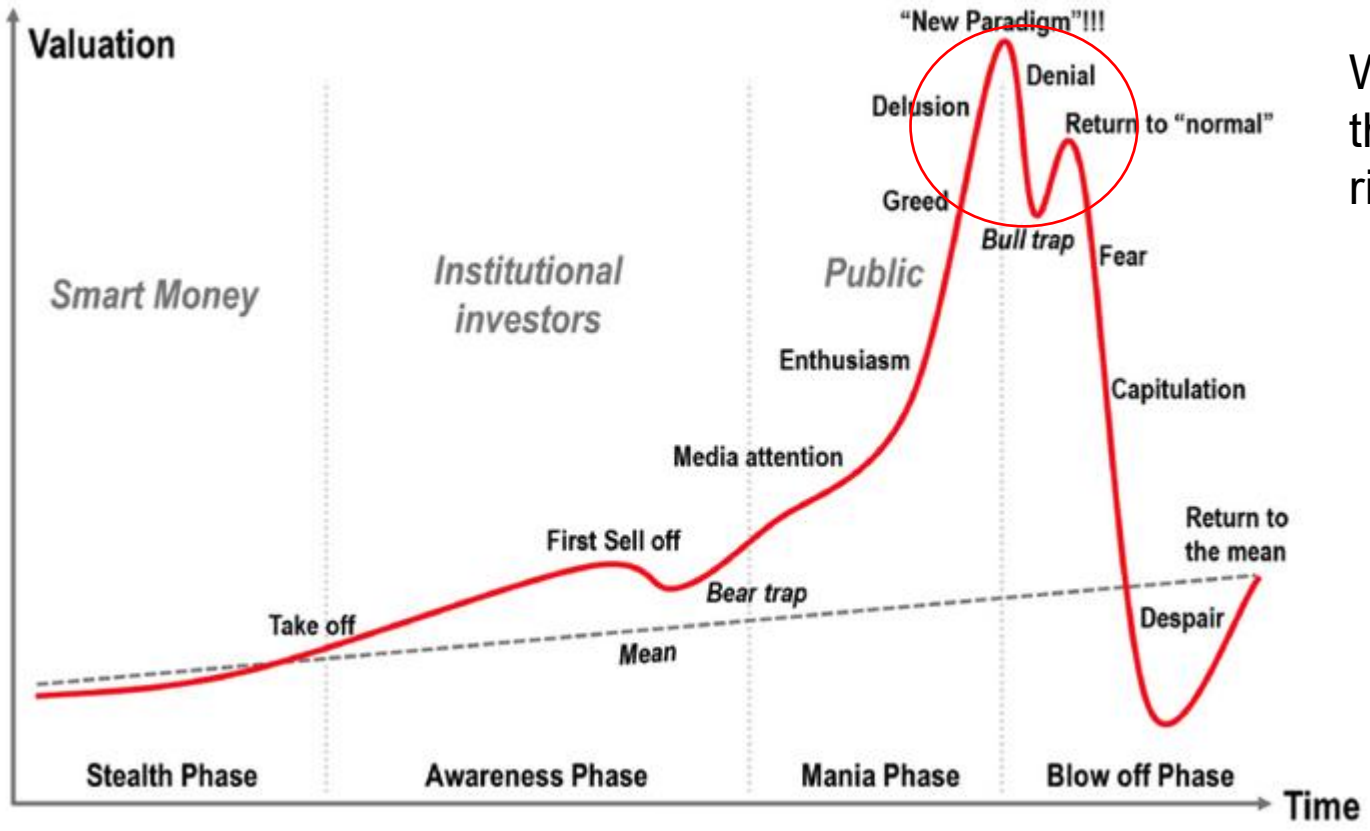

What can I do?
How about writing a song in memory of this period?

Source:

[2] https://www.aei.org/commentary/the-ai-boom-loop/

My example 1 – My first MV

From Greed to Madness to Despair to Silence

Where I think AI is right now

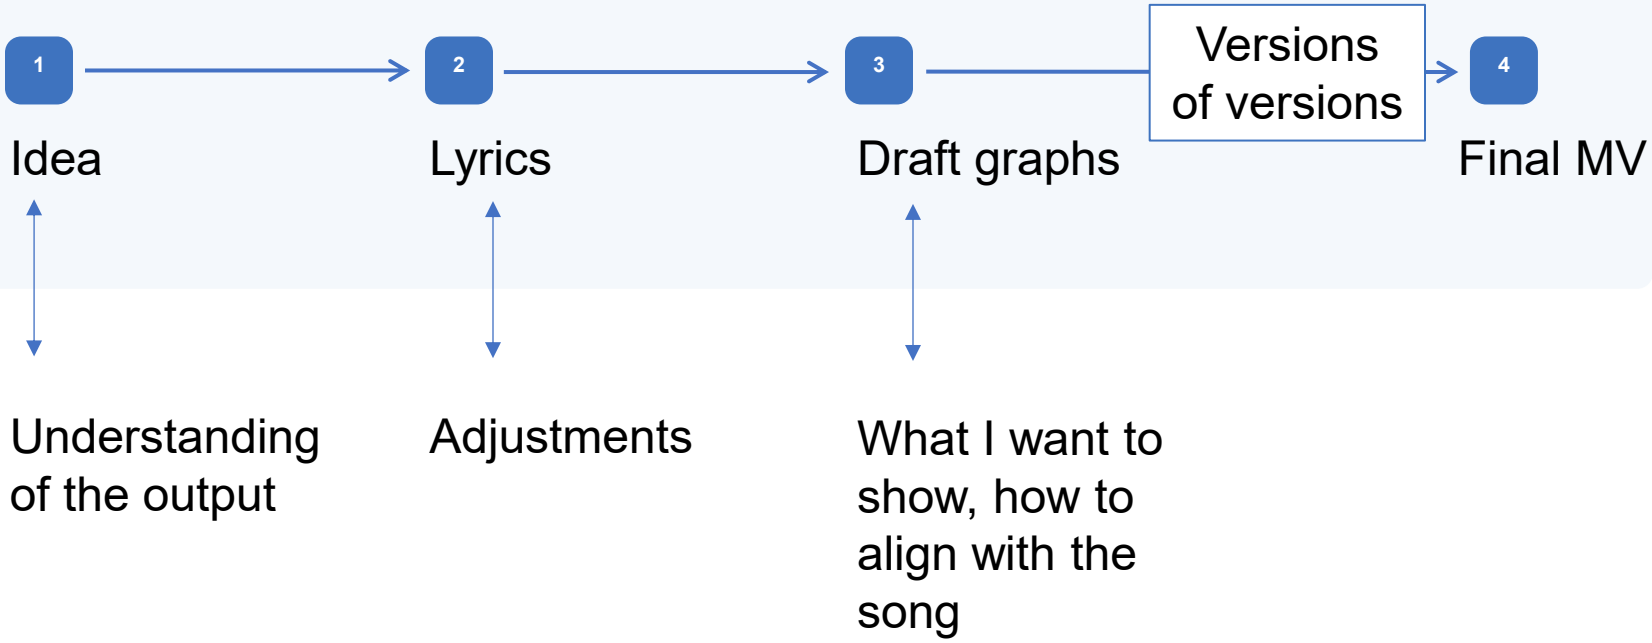

Source: Dr. Jean-Paul Rodrigue, Dept of Global Studies & Geography, Hofstra University

My example 1 – My first MV

From idea to output

How the MV is generated

An idea with high execution and rounds of adjustments

Source: https://openart.ai/suite/profile/@monkey_testy_52_595831

My example 1 – My first MV

MV project - Capabilities

01

Imagination

Can I turn what I thought into an MV?

02

Curiosity

How to make an MV?

03

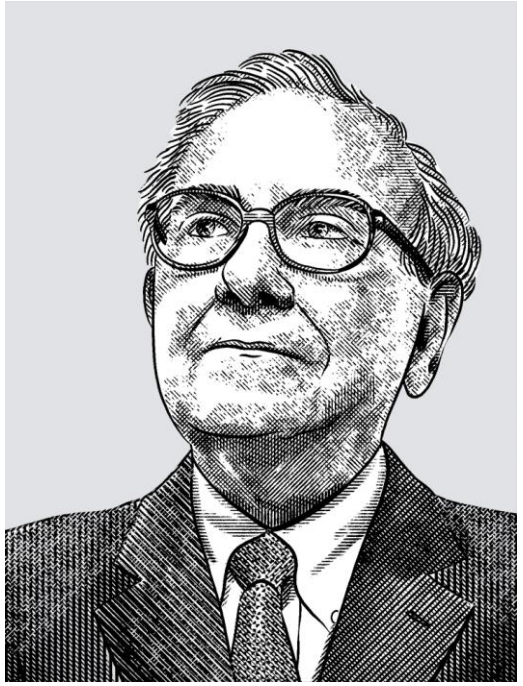

Execution & Resilience

Continuous improvements

My First Quant project – Quantify greed and fear

“Be fearful when others are greedy, and greedy when others are fearful”

-- Warren Buffett

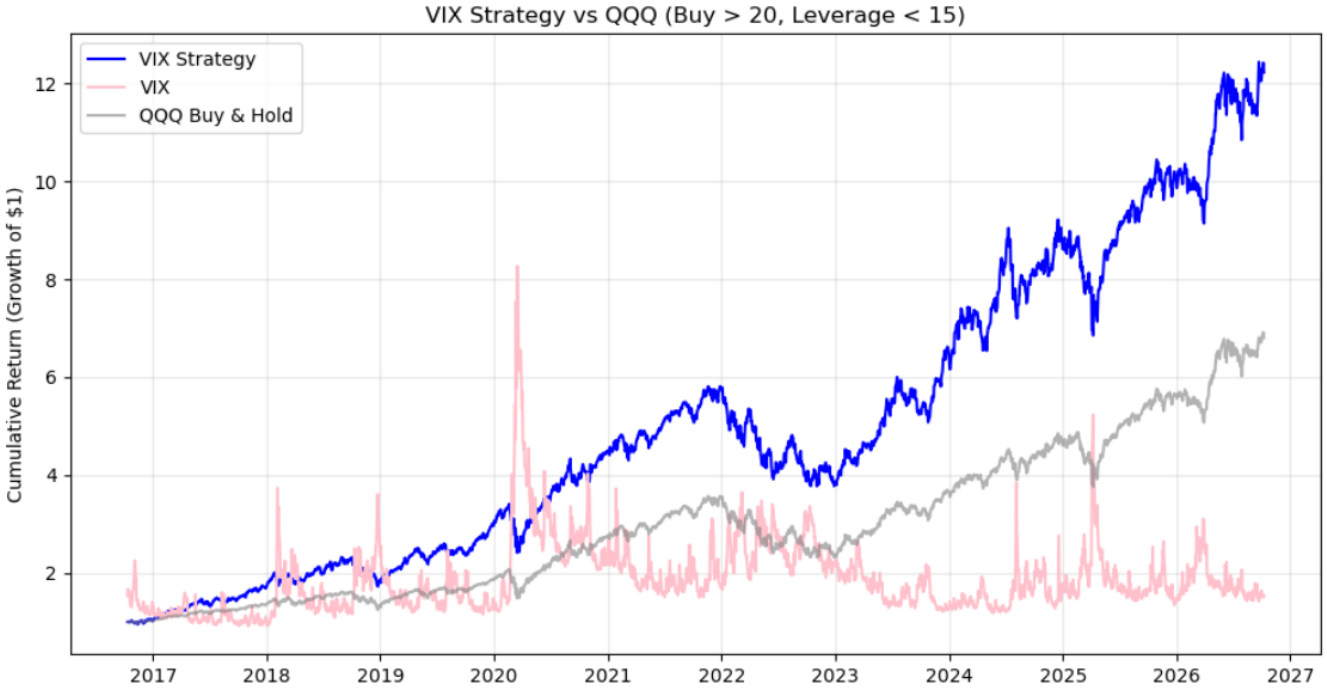

But
How can I quantify it?

Source: Warren Buffett – “1986 letter to Berkshire Hathaway shareholders”

VIX based greed and fear –
Hold VIX >20, Leverage VIX <15

```
=== Performance Report (10 Years) ===
Strategy Thresholds: Buy VIX>20, Lev VIX<15
Strategy CAGR: 28.46%
Benchmark (QQQ) CAGR: 21.15%
Strategy Sharpe Ratio: 1.12
Benchmark (QQQ) Sharpe Ratio: 0.97
Strategy Max Drawdown: -35.12%
Benchmark (QQQ) Max Drawdown: -35.12%
```

Version 2: Investment strategy performance ratios

FULL PERIOD PERFORMANCE

	VIX Strategy (Net)	QQQ Buy & Hold	BIL Cash Proxy
Total Return	812.30%	571.01%	25.60%
CAGR	24.76%	20.98%	2.31%
Annual Volatility	31.36%	22.57%	0.25%
Sharpe	0.79	0.86	0.00
Sortino	1.13	1.22	N/A
Max Drawdown	-50.12%	-35.12%	-0.21%
Calmar	0.49	0.60	11.07
QQQ Beta	1.37	1.00	-0.00

RECENT THREE-YEAR PERFORMANCE

	VIX Strategy (Net)	QQQ Buy & Hold	BIL Cash Proxy
Total Return	153.71%	107.42%	13.94%
CAGR	36.42%	27.55%	4.45%
Annual Volatility	26.49%	20.43%	0.23%
Sharpe	1.14	1.08	0.00
Sortino	1.74	1.60	N/A
Max Drawdown	-30.71%	-22.77%	-0.01%
Calmar	1.19	1.21	406.13
QQQ Beta	1.27	1.00	-0.00

Version 3: More indicators than VIX:
Rolling Volatility, RSI, MACD, MA, Relative Volume

Source: https://github.com/Xiaowen-CHEN-Learner/Quantitative-investing_Quantamental-approach/tree/main/Market_Sentiment_Monitor

Version 3: Stock Sentiment ranking / filtering: 10Y, 5Y, 2Y (as of Oct 9 2026)

```
--- SUMMARY STATISTICS ---
Average sentiment by period:
10Y Average: 48.6
 5Y Average: 44.8
 2Y Average: 44.5

Most bullish stocks (highest average sentiment):
1. SHEL: 65.2
2. SHOP: 63.4
3. PLTR: 62.9
4. TJX: 60.1
5. ABBV: 59.8
6. VUG: 58.2
7. COST: 58.1
8. ISRG: 57.8
9. VOO: 57.7
10. VTI: 57.6

Most bearish stocks (lowest average sentiment):
1. HSBC: 25.6
2. VZ: 26.8
3. QCOM: 27.8
4. ARM: 28.4
5. MCD: 28.8
6. GS: 29.6
7. TMUS: 29.9
8. INTC: 30.4
9. MS: 30.5
10. PEP: 31.0
```

Overcrowded stocks with high sentiment

Oversold stocks with low sentiment

Top 10 output sample

```
=== SENTIMENT ANALYSIS RESULTS ===
Higher values (red) = More bullish/greedy sentiment
Lower values (green) = More bearish/fearful sentiment
Range: 0-100 (Typical range: 20-80)
```

Stock	10Y	5Y	2Y
NVDA	52.4	50.8	52.7
MSFT	56.1	53.5	53.4
AAPL	53.8	56.7	58.1
GOOG	44.5	42.8	40.8
AMZN	48.9	50.9	47.9
META	46.0	46.3	44.9
AVGO	44.0	38.9	40.6
TSLA	50.8	53.3	55.4
TSM	50.5	53.4	57.2
BRK-B	60.2	58.2	52.2
JPM	43.2	34.4	36.3
VOO	59.6	57.0	56.6
ORCL	40.7	41.3	42.1
WMT	52.9	52.7	49.8

Quant project - Capabilities

01

Imagination

Can I turn Buffett's words into a testable strategy?

02

Curiosity

How should I do this?

03

Execution

Repeated testing and adjusting

04

Judgment

How much greed is regarded as greedy? How can we define that?

05

Resilience

Further improvement- Stock ranking & Backtest

Source: https://github.com/Xiaowen-CHEN-Learner/Quantitative-investing_Quantamental-approach/tree/main/VIX_for_Index_Strengthen

My example 3 – Career Hunt – Use AI to find jobs

Make it easier to find jobs

Different platforms, different positions, different CV
What should I do?

Source: https://recruitcrm.io/blogs/online-job-boards/

My example 3 – Career Hunt – Use AI to find jobs

AI as my career-search co-pilot

01
Build evidence

Combine CVs, projects record.

MASTER CV v4.0

02
Clarify direction

Clear understanding of myself

40 PREFERENCE

03

Match roles

Run recurring scans; check fitting; rank suitable openings.

Scanning

04

Prepare & refine

Tailor CVs and letters; practice interviews

CVs / INTERVIEWS

My example 3 – Career Hunt – Use AI to find jobs

Career Hunt - Capabilities

01

Clarification

Clearly understand what I want

02

Curiosity

What positions do I want to do; what positions fit me

03

Execution

Networking and continuously apply for jobs

04

Customization

Different CV for different positions

05

Resilience

How can I improve? What are my gaps?

06

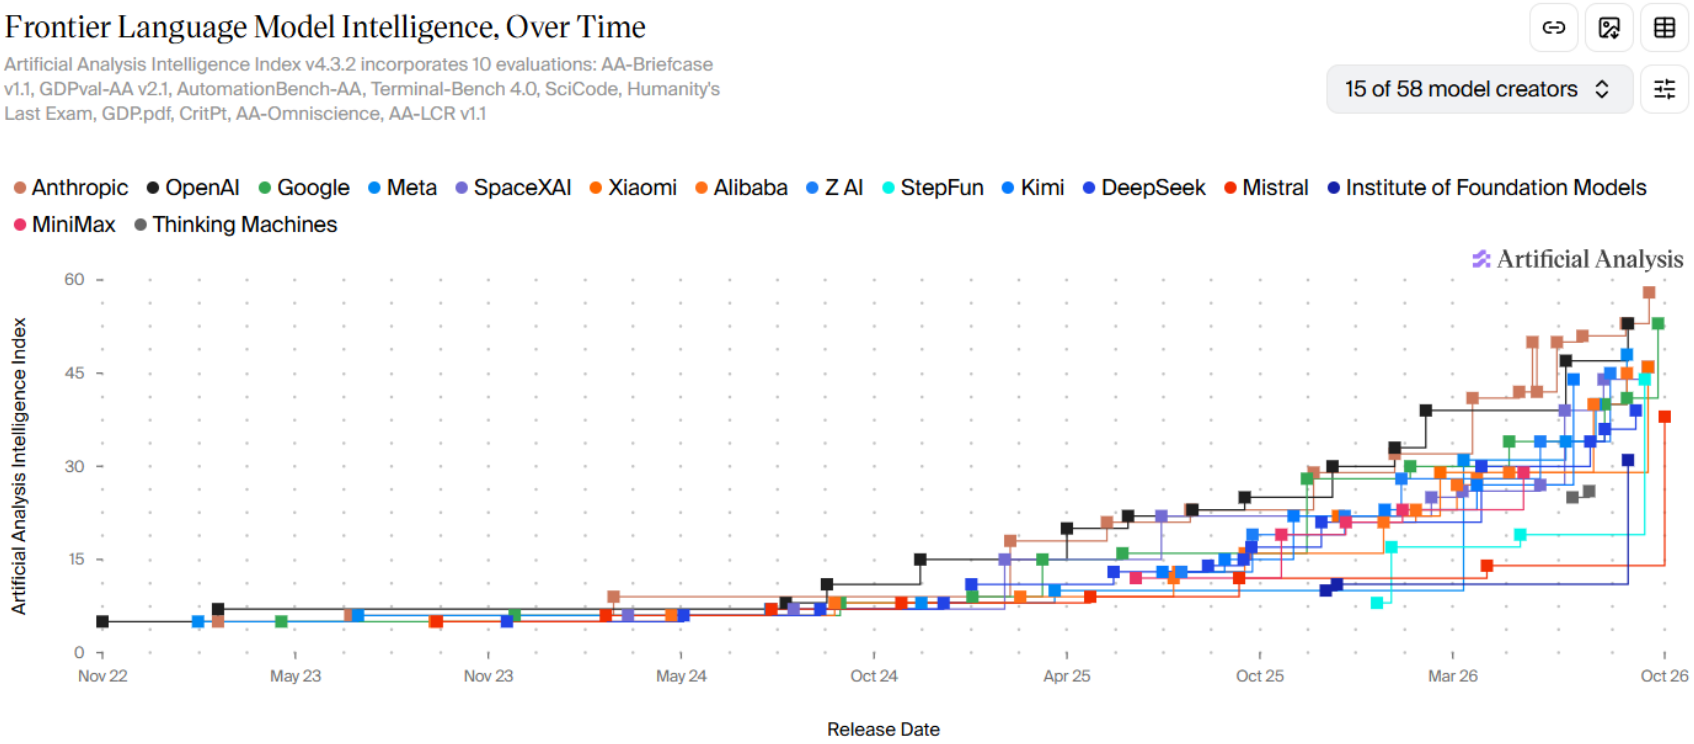

Authenticity

My true self

Part IV — Conclusion

The development of AI models is inevitable

Models will become more advanced in the future

Source: https://artificialanalysis.ai/trends

Part IV — Conclusion

AI expands my options; I still set the purpose

Language expresses my intention. Human judgment determines whether that intention is worth pursuing.

Project	AI-supported work	Human responsibility
My first MV	Lyrics, visuals and iterative revisions	Choose the message; align the creative pieces.
Quant project	Indicators, backtests and stock rankings	Define the hypothesis; judge what the results justify.
Career Hunt	Role scans, CV drafts and interview practice	Choose genuine fit; represent myself honestly.

> **The common lesson: output is not the same as outcome.**

Part IV — Conclusion

Why these human capabilities matter more

As AI produces more possibilities, my attention shifts to choosing goals, testing claims and learning from consequences.

01	**Imagination & problem formulation**	More possible solutions make choosing the right problem more important.
02	**Judgment & values**	More persuasive answers demand stronger checks on evidence, incentives and values.
03	**Execution & resilience**	Cheaper experiments create more learning opportunities—but only if I act and adapt.

Human responsibility—not a claim of permanent human exclusivity.

Part IV — Conclusion

Good judgment must challenge AI—and myself

The risk is not only a wrong answer. It is an answer that serves my preferences more than my purpose.

Possible temptation	Question I should ask
MV: a compelling story	Could a credible alternative story challenge my original interpretation?
Quant: an attractive backtest	Would I still choose it after testing risk, costs and robustness?
Career: a prestigious title	Am I choosing genuine fit—or seeking status and approval?

> **My rule: look for evidence that could change my mind.**

Part IV — Conclusion

My answer: delegate tasks, not responsibility

AI can assist at every stage. I remain responsible for the goal, the standards and the consequences.

01 FRAME

Imagination & clarification

Define the goal.
State constraints.
Find alternatives.

›

02 CHALLENGE

Judgment & authenticity

Check evidence.
Weigh trade-offs.
Stay truthful.

›

03 ACT & ADAPT

Execution & resilience

Run a small test.
Review feedback.
Revise—or stop.

More capable AI should make me more deliberate—not less—in deciding what is worth doing.
