Guide to GitHub – HTML code

The screenshot shows the GitHub interface for a repository named 'Website' by user 'Xiaowen-CHEN-Learner'. The repository is public. The top navigation bar includes links for Code, Issues, Pull requests, Agents, Actions, Projects, Wiki, Security and quality, Insights, and Settings. Below the repository name, there are buttons for Pin, Watch (0), Fork (0), and Star (0). The main content area has two cards: 'Start coding with Codespaces' and 'Add collaborators to this repository'. Below these is a 'Quick setup' section with a light blue background. It offers three options: 'Set up in Desktop', 'HTTPS', and 'SSH'. The 'HTTPS' option is selected, showing the URL 'https://github.com/Xiaowen-CHEN-Learner/Website.git'. Below the URL, it says 'Get started by [creating a new file](#) or [uploading an existing file](#)'. An arrow points to the 'creating a new file' link. Below this, there is a section titled '...or create a new repository on the command line' with a code block containing the following commands:

```
echo "# Website" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/Xiaowen-CHEN-Learner/Website.git
git push -u origin main
```

Below the code block, there is a section titled '...or push an existing repository from the command line'.

Guide to GitHub – HTML code

The screenshot illustrates the GitHub web editor interface for creating a new file. The top navigation bar shows the repository name 'Xiaowen-CHEN-Learner / Website' and a search bar. Below the navigation bar, the 'Code' tab is selected, and the file 'index.html' is being edited in the 'main' branch. The editor area is divided into 'Edit' and 'Preview' tabs. The 'Edit' tab is active, showing a text input field with the placeholder 'Enter file contents here'. The 'Preview' tab is also visible. The interface includes buttons for 'Cancel changes' and 'Commit changes...'. The file name 'index.html' is highlighted in a yellow box, and the text '1 Type exactly: index.html' is overlaid on the image. The text '2 Paste your code here' is overlaid on the editor area. The text '3 Commit changes twice' is overlaid on the right side of the editor area. The bottom of the interface shows a footer with keyboard shortcuts: 'Use Control + Shift + m to toggle the tab key moving focus. Alternatively, use esc then tab to move to the next interactive element on the page.'

Website / index.html in main

Cancel changes Commit changes...

1 Type exactly: index.html

Edit Preview

1 Enter file contents here

2 Paste your code here

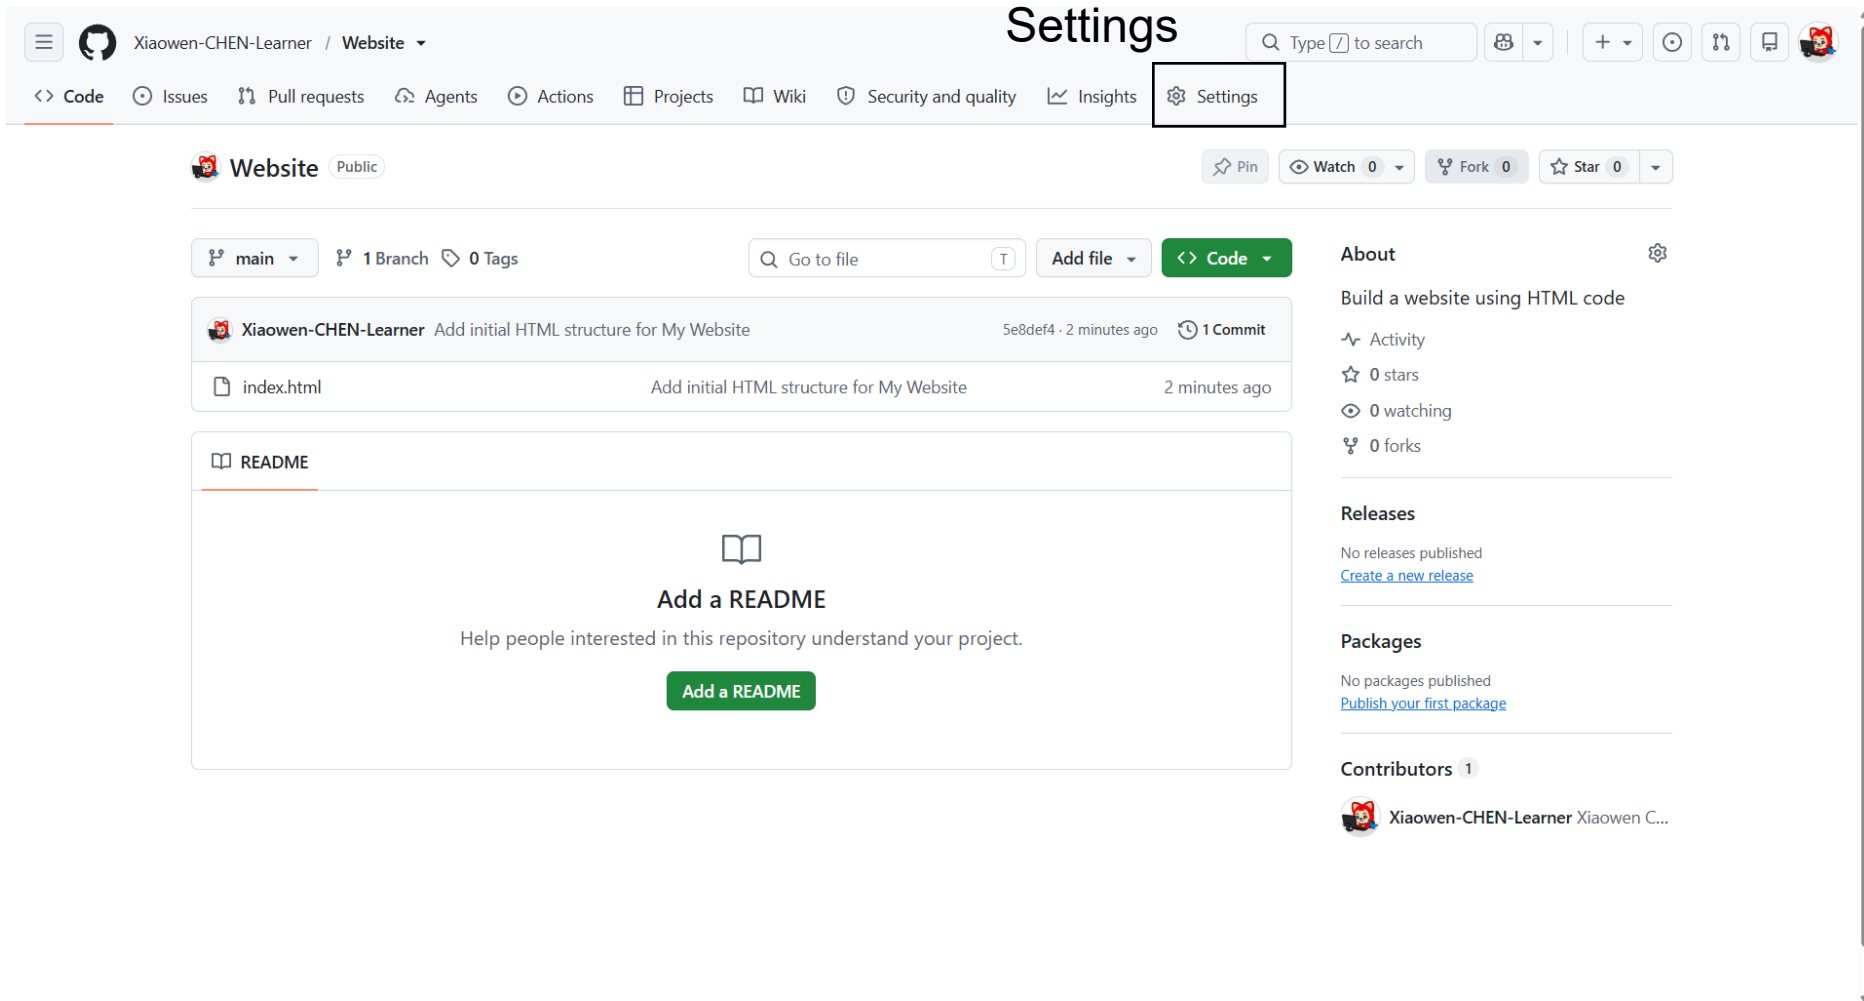

3 Commit changes twice

Use Control + Shift + m to toggle the tab key moving focus. Alternatively, use esc then tab to move to the next interactive element on the page.

Guide to GitHub – HTML code to Website

The screenshot shows the GitHub repository settings page for a repository named 'Website'. The left sidebar contains a list of settings categories: General, Access, Code, planning, and automation, Releases, Social preview, and Security and quality. The 'Pages' category is highlighted with a red box. The main content area is divided into sections: General, Default branch, Releases, and Social preview. The 'General' section includes fields for 'Repository name' (set to 'Website') and a 'Rename' button. Below this is a checkbox for 'Template repository' with a link to 'Learn more about template repositories'. The 'Default branch' section shows the 'main' branch selected. The 'Releases' section has a checkbox for 'Enable release immutability'. The 'Social preview' section includes a description and a link to 'Download template'.

Guide to GitHub – See your website

The screenshot shows the GitHub Pages configuration interface. On the left is a sidebar with navigation links: General, Access, Collaborators, Moderation, Code, planning, and automation (with sub-links for Rulesets, Branches, Tags, Actions, Webhooks, Copilot, Planning, Environments, and Codespaces), and Pages (which is highlighted). The main content area is titled 'GitHub Pages' and includes a green callout box with the text: 'Keep refreshing and wait for 1-3 minutes. Congrats if you see live at “...” That’s your website'. Below this, a status box indicates the site is live at <https://xiaowen-chen-learner.github.io/Website/>, last deployed by 'Xiaowen-CHEN-Learner'. It features 'Visit site' and 'Unpublish site' buttons. The 'Build and deployment' section shows the 'Source' is 'Deploy from a branch', the 'Branch' is 'main', and the path is '/ (root)'. It also provides links for adding a Jekyll theme and learning about deployment workflows.

Guide to GitHub – Change HTML code

The screenshot shows the GitHub interface for a repository named 'Website' by user 'Xiaowen-CHEN-Learner'. The repository is public. The 'Code' button is highlighted with a red box. Below the repository name, there's a commit history section showing a commit 'Add initial HTML structure for My Website' by 'Xiaowen-CHEN-Learner' with a file 'index.html' also highlighted. Below the commit, there's a 'README' section with a prompt to 'Add a README'. The right sidebar shows repository statistics: 0 stars, 0 forks, 0 watches, and 0 releases. The 'About' section says 'Build a website using HTML code'. The 'Releases' section says 'No releases published'. The 'Deployments' section shows 'github-pages' deployed 3 minutes ago. The 'Packages' section says 'No packages published'. The 'Contributors' section shows 'Xiaowen-CHEN-Learner' as the only contributor.

To change the website, you can always go to
“<>Code” -> index.html -> Edit

Guide to GitHub – How to deal with issues

Prompt:

Role: You are a professional on GitHub

Task: I want to build a website on GitHub using HTML code

My issue: I'm on the step shown in the screenshot. What are my next steps?

(Remember to attach a screenshot of what GitHub is showing)

From idea to realization

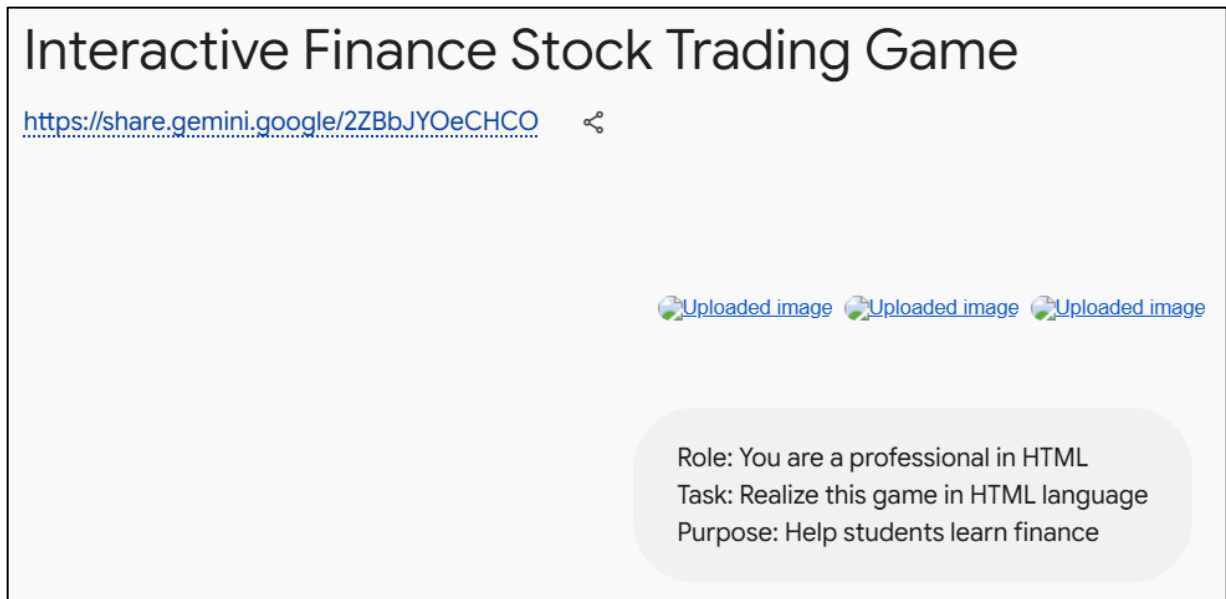

In the past:

Idea -> Designer -> Programmer -> Testing -> Reviewer -> Result

Now:

Idea -> Prompt -> HTML code -> GitHub -> Website

Prompt:

Source: https://gemini.google.com/share/d/1clYKp11P4vqQ-VMiZeHDHl4_kgibpjS5?usp=sharing

First version

XOM Trading Game — Round 1 of 5

Date: April 20, 2020 — market close

Exxon Mobil (XOM): \$41.18

XOM fell 4.7% that day.

What you know at this moment

- The COVID-19 shutdown has caused an extraordinary collapse in transportation and petroleum demand. Earlier in April, the EIA was forecasting global liquid-fuels demand in April to be about **17.1 million barrels/day below the 2019 average.**
- Today, the expiring **May WTI crude contract collapsed to -\$37.63/barrel**, the first negative settlement in history. Storage constraints and evaporating near-term demand were major factors. Importantly, June WTI remained around **\$20.43**, so the negative price was partly a specific futures/storage dislocation rather than "all oil is worth -\$37."
- Exxon had already responded on April 7 by cutting planned 2020 capital spending **30%, from \$33 billion to about \$23 billion**, and targeted a **15% reduction in cash operating expenses.**
- There is one major potential positive: on April 12, OPEC+ agreed to cut crude production by **9.7 million barrels/day beginning May 1**, an unprecedented attempt to rebalance the market.

Note: HTML visualized using <https://html.onlineviewer.net/>

First version

Your position

Shares owned: 0

XOM price: \$41.18

Your trade

Choose one:

A. Buy 100 shares

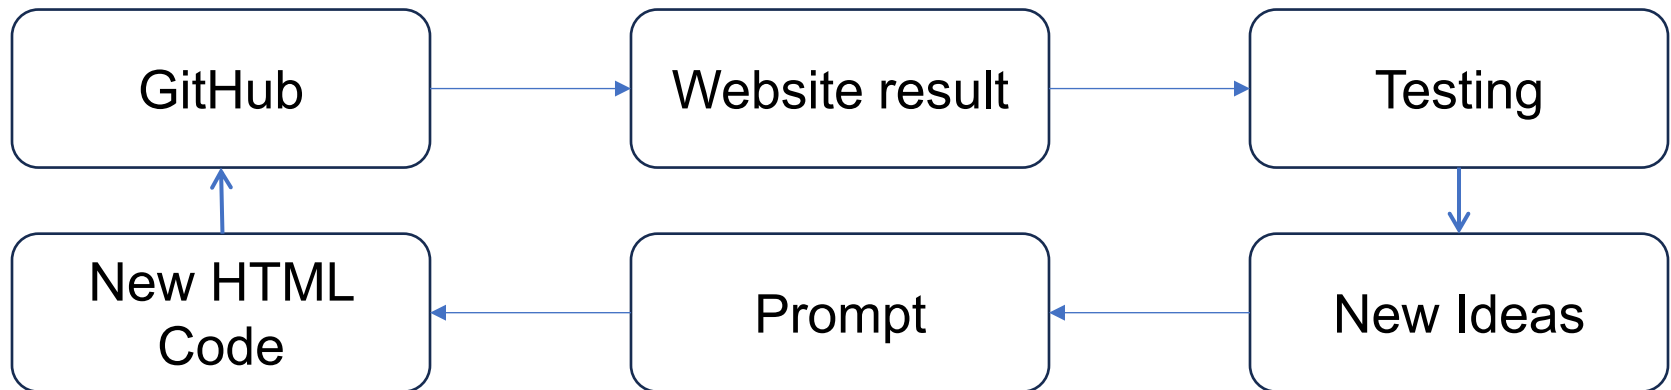

B. Buy 10 shares

C. Do nothing — 0 shares

You cannot sell yet because you own no shares.

Note: HTML visualized using <https://html.onlineviewer.net/>

Improvements - New functions and bug fixing

Prompt:

Role: You are a professional in HTML

Task: Fix the code

Requirements:

[Function 1]

[Function 2]

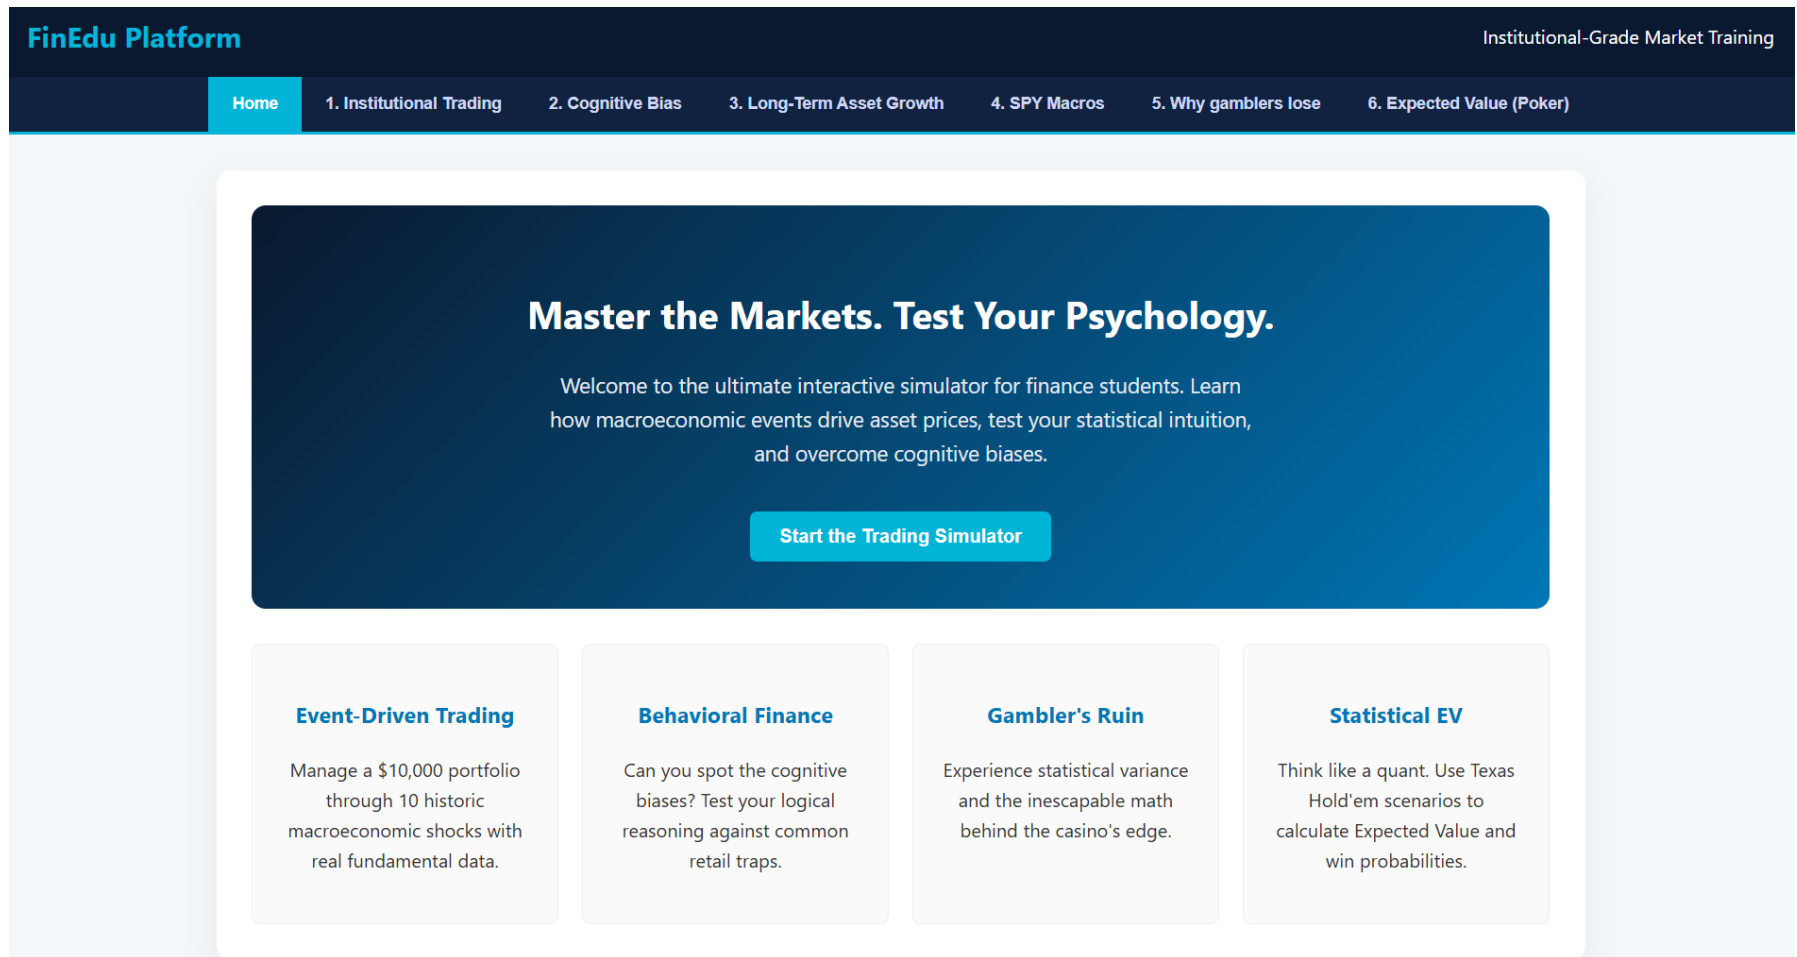

[Function 2]

..... (Other prompt based on your need)

Code: [Previous code]

Source: https://gemini.google.com/share/d/1clYKp11P4vqQ-VMiZeHDHl4_kgibpjS5?usp=sharing

Improvements – User Interface

Source: <https://xiaowen-chen-learner.github.io/Learn-Finance-Though-Games/>

Purpose of the website

To solve different problems when learning finance

Institutional trading questions to solve:

How to understand the influence of events on the stock price?

What does trading look like?

How to test your trading skills?

How to understand price-in?

Source: <https://xiaowen-chen-learner.github.io/Learn-Finance-Though-Games/>

Demo 1 – Institutional Trading

Understand event-driven trade in games

1. 10-Round Event-Driven Trading Game

Round 1 of 10

Portfolio: \$10,000

April 20, 2020 — The Negative Oil Contract

WTI Crude Oil May contract just settled at -\$37.63/barrel. Exxon Mobil (XOM) has dropped significantly. Do you buy?

- XOM Price: \$41.18
- XOM Div Yield: ~8.5%
- S&P VIX: 43.83
- US 10-Yr Yield: 0.61%

Buy heavily (Oversold anomaly)

Buy slightly

Avoid entirely (Fundamental destruction)

Source: <https://xiaowen-chen-learner.github.io/Learn-Finance-Though-Games/>

Purpose of the website

To solve different problems when learning finance

Cognitive Bias questions to solve:

What are the common biases while investing?

How to know if you have biases that you are not aware of?

How to deal with biases?

Demo 2 – Cognitive Bias

Understand biases in making investment decisions

2. Behavioral Finance: Bias Identification

Analyze the following scenarios. Decide if the investor is acting rationally or if they are falling victim to a cognitive bias.

Assessment 1 of 10

You bought a tech stock at \$100. It is now \$40. Earnings have shrunk, competitors are winning. You refuse to sell until it gets back to \$100 because 'you refuse to lock in a loss.'

Not Biased

Biased: Sunk Cost / Anchoring

Biased: Recency Bias

Source: <https://xiaowen-chen-learner.github.io/Learn-Finance-Though-Games/>

Purpose of the website

To solve different problems when learning finance

Asset price history & SPY price history questions to solve :

How to understand what happened in the past 100 years?

What are the events that drive the price moves of the US stock market?

How has the US stock market moved in the past 10 years?

What are the positive, neutral, and negative events for the stock market?

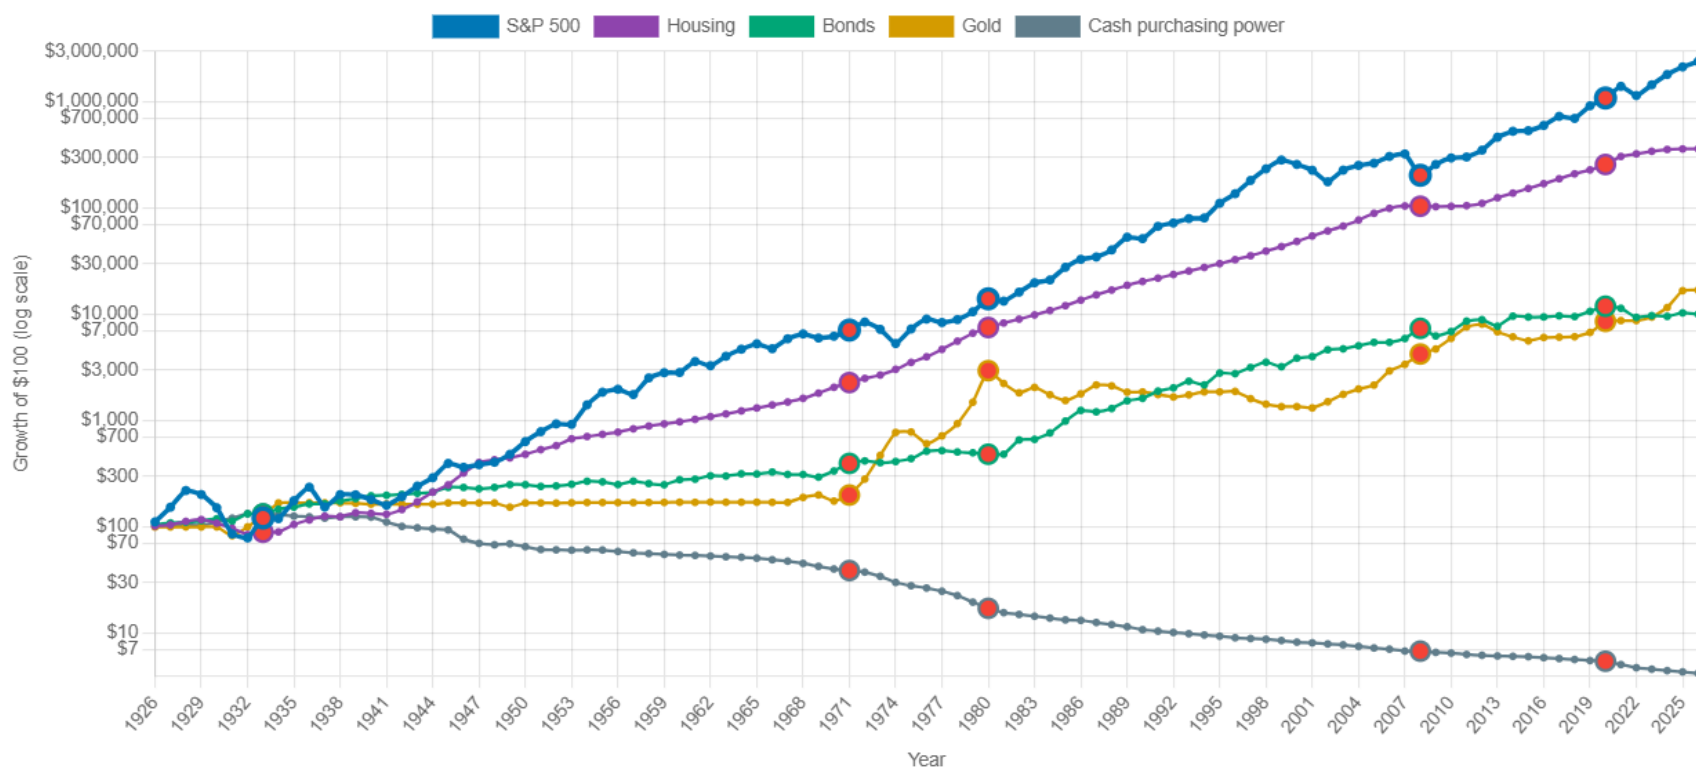

Source: <https://xiaowen-chen-learner.github.io/Learn-Finance-Though-Games/>

Demo 3 – Asset Price History

Understand how policy influences asset prices in the long-term

3. Asset Price History (1926 - 2026)

Historical growth of \$100 compounded from annual returns for the S&P 500, housing, bonds, gold, and cash purchasing power. The vertical axis is logarithmic. The final point is a 2026 year-to-date snapshot — each series uses its own latest available observation date, not one common cutoff.

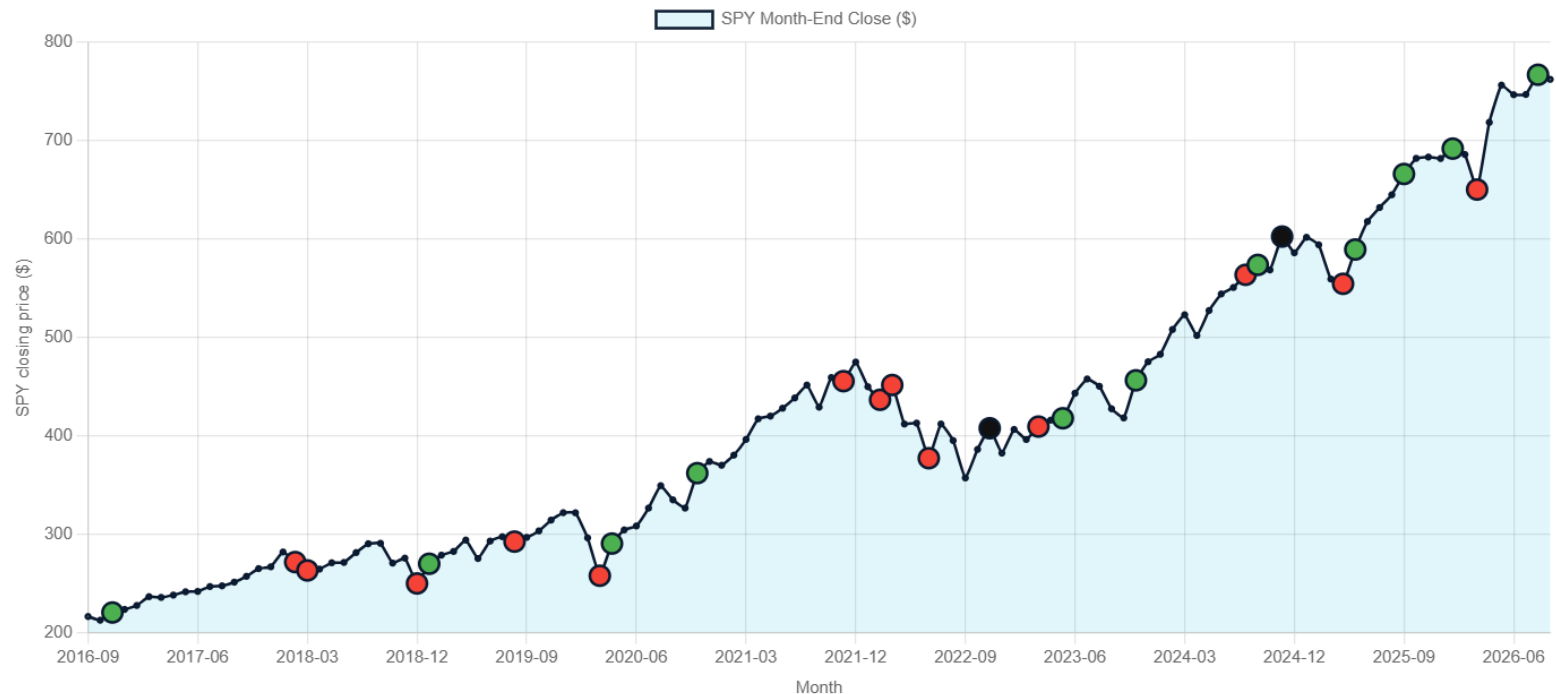

Source: <https://xiaowen-chen-learner.github.io/Learn-Finance-Though-Games/>

Demo 4 – Events influenced the US stock market

Understand what happened in the last 10 years

4. SPY Price and Macro Events (September 2016 - September 9, 2026)

Actual month-end SPY closing prices derived from the supplied daily Nasdaq history. Event markers annotate the observed price series and never alter it.

Source: <https://xiaowen-chen-learner.github.io/Learn-Finance-Though-Games/>

Purpose of the website

To solve different problems when learning finance

Gamblers' game questions to solve:

How to understand gambling?

Why gamble is loss marking in the long run?

How to understand gambling statistically and visually?

Why can gambling make money in the short run and ultimately lose in the long run?

Demo 5 – Why Gamblers Lose

Fully understand how gamblers lose money visually

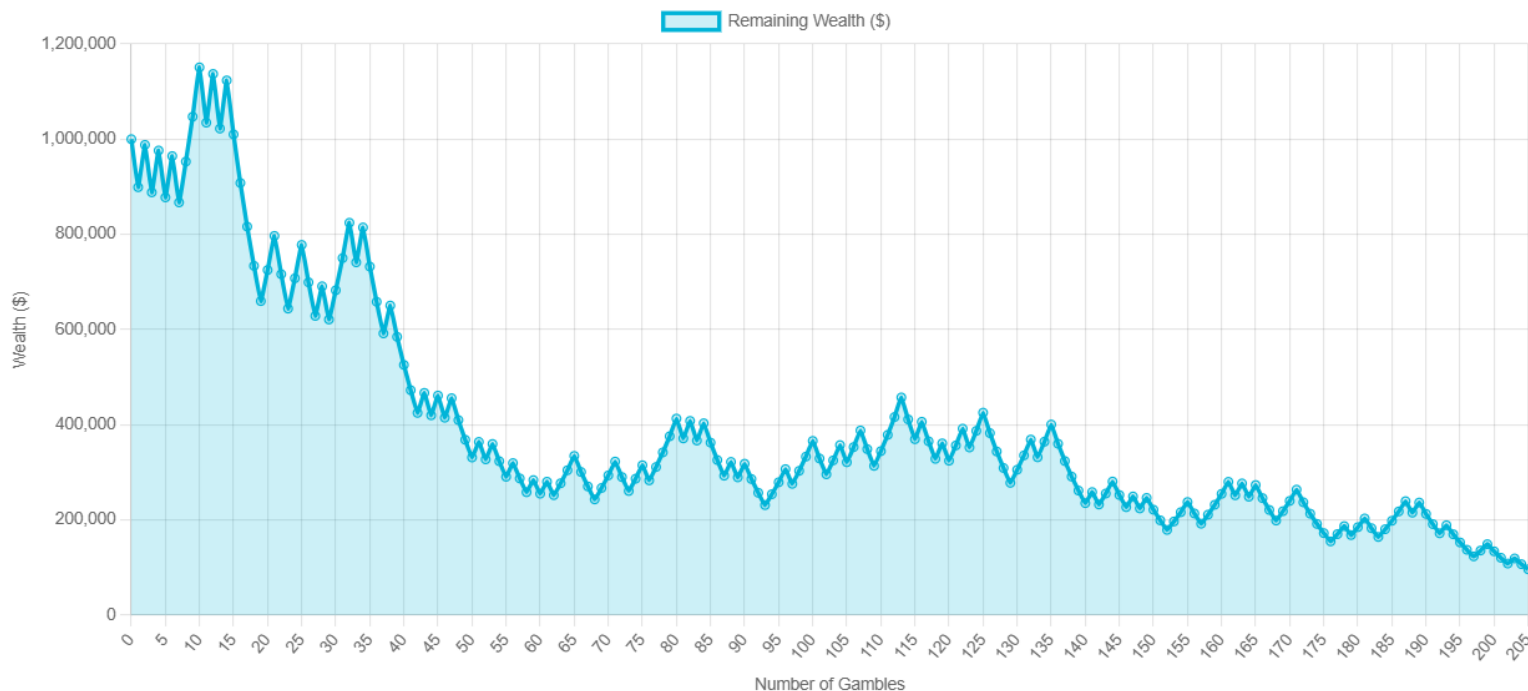

You start with **\$1,000,000**. You are playing a 50/50 game (Big or Small). The catch? Every gamble costs a **1% expense ratio on your wager**. You must wager 10% of your total remaining wealth each round.

Trial: 205

Your Wealth: \$96,122

You lost 90% of your money! Math and expense ratios eventually win.

Reset Simulation

Source: <https://xiaowen-chen-learner.github.io/Learn-Finance-Though-Games/>

Purpose of the website

To solve different problems when learning finance

Poker game questions to solve:

How to test my understanding of Poker?

Is my estimate of the win rate correct?

In the classic Poker scenarios, am I making the right decisions?

How to understand Poker from a statistical and mathematical perspective?

Source: <https://xiaowen-chen-learner.github.io/Learn-Finance-Though-Games/>

Demo 6 – Classic Poker games

Learn poker through classic poker games

6. Expected Value (Poker)

Quant firms love poker because it forces decision-making under uncertainty using incomplete information and statistical probability.

Hand 1 of 10

Pot: \$100 | Bet: \$20

The pot is \$100. Opponent bets \$20. You must call \$20 to win \$120 total. You estimate you have a 25% chance of hitting your winning flush on the river. EV?

Call (+EV)

Fold (-EV)
